BALA'S SOLD OUT PRESENTATIONS AT BICSI NASHVILLE CONFERENCE

The word spread about Bala's presentation Technology Trends Driving Data Center Design. Walt Herring, RCDD/NTS/OSP presented this topic to a SOLD OUT audience at the BICSI Conference in Nashville, TN on April 29th. The presentation looks at the evolution of the modern data center, comparing design requirements and component options available today vs. those of a data center that is a few years old. Topics include cable plant, topologies, distribution, racking & support, access floor management, and converged & meshed networks within the modern data center. This presentation is available for download in the Presentations section of our website.

In addition to this presentation, Bala also presented The GPS Roadmap to a Reliable Data Center to a SOLD OUT crowd at the BICSI Nashville Conference. Joe Ford, RCDD, Chuck Kensky, PE, LEED AP, and Bruce Young, PE presented this topic in an animated GPS screen format. The presentation discussed the disciplines involved in engineering and building a reliable data center from a technology, environmental, power and life safety perspective, with an eye on being "green." You can download this presentation from the Presentations section of our website as well.

More information on the conferences can be found online at BICSI.
