YOU SAY YOU WANT AN EVOLUTION: COMCAST'S REVOLUTIONARY APPROACH TO DATA CENTERS AND A GREENER FUTURE

Join us at the national 7x24 Exchange Conference, The Green Horizon, on November 18th at 10:30 a.m. for this revolutionary presentation and virtual Data Center Tour.

Tasked with designing and building more robust, scalable and greener Data Centers to support the explosive growth of the United States' largest provider of cable services, and one of the world's leading communications companies, Comcast's Data Center operations group built a team based on a commitment to leadership, innovation and sustainable initiatives. The evolution of Comcast's Data Centers has progressed rapidly, in less than 2 years, moving from traditional design to innovative, energy efficient high density solutions. With a revolutionary Rock 'n' Roll theme and a Virtual Data Center tour, the Comcast team will detail how they built their Data Center team from scratch, challenged conventional design concepts, and embraced innovation and sustainable initiatives to develop a national standard for their Data Centers, on the road to achieving the corporation's green goals.

Presented by: Gary Aron, John Roam, and Rich Werner from Comcast and Daniel McGroary from Bala

Check out the conference website and register to attend at 7x24 Exchange Fall 2008 Conference.
