**BALA TO PRESENT AT NATIONAL BICSI CONFERENCE IN 2011 ON
GPON IN THE COMMERCIAL ENVIRONMENT**

Joseph Ford, RCDD and Bruce Osborn, RCDD, members of Bala's Integrated Technologies Group, will present at the January 2011 BICSI National Conference in Orlando, FL. Their topic, "Sine Language: The Ups and Downs of GPON," will evaluate the pros and cons of Gigabit Passive Optical Networks in the commercial office environment. Passive Optical Network technology has existed for many years, but is mainly used in the residential environment. With corporations looking to reduce their carbon footprint and prove their commitment to sustainability, the application of GPON commercially can offer great opportunities.

If you are planning to attend the BICSI winter conference, don't miss this great presentation! For more information visit the BICSI conference website www.bicsi.org/winter.
