BALA IS A TOP 100 GREEN DESIGN FIRM

[Engineering News Record \(ENR\)](#) named Bala Consulting Engineers as a 2011 Top 100 Green Design Firm. The magazine ranks design firms across the country based on revenue from projects registered with a third-party ratings group under objective sustainable design standards. The rankings based on 2010 projects showed a 12.5% revenue increase from 2009 and shift in focus from first costs to facility life-cycle costs as driving factors in sustainable design.

With new energy modeling and performance evaluation tools Bala is able to demonstrate to our clients the benefits and ROI for their sustainable design practices. We are also helping clients earn rebates from many state incentive programs, such as PECO Smart Construction Incentives and the New Jersey Pay for Performance program. Monies from these programs can help reduce first costs and help clients see a faster ROI. With many state and local building codes adopting sustainable design requirements, Bala sees sustainable design becoming much more mainstream.

Bala has engineered and/or commissioned over 100 LEED certified projects, from silver to platinum level, for buildings in almost every LEED category, from new construction to schools. Contact us for your next sustainable design project!

[Bala Consulting Engineers](#) provides intensive engineering services for buildings, making them more energy efficient, secure and reliable. From green data centers and pioneer LEED projects, to proprietary commissioning and data migration processes our experience is unparalleled. In 2009, Bala formed an affiliate firm, [PHY Engineers, Inc.](#) PHY engineer's have extensive experience in high-rise, lifecare, and historic/adaptive re-use projects. Together we form one of the most innovative engineering and consulting groups in the MidAtlantic/ NE region with projects throughout the US.
