Exton, PA

SQUARE FEET:

74,000

COMPLETED:

2011

SERVICES:

MEP/FP, and Voice/Data Engineering, Relocation Planning

ARCHITECT:

Casaccio Architects

CITADEL FEDERAL CREDIT UNION

Citadel has been in existence for 75 years with facilities throughout the Philadelphia suburbs. In an effort to centralize operations to ne facility they consolidated their Data Center operations to their new headquarters in Exton, PA.

Bala provided full suite ITS design for a new 4 story headquarters building and MEP and ITS engineering for their Data Center. The new site was created as a means of consolidating two separate sites into a single site. The MEP infrastructure for the Data Center was configured in an N+1 configuration for the MEP availability through out the Data Center space. Bala provided full IT designs for the open office structured cabling systems including traditional voice, data, wireless, and building automation integration.

In addition to the design suite of services offered, Bala also performed the relocation of

the two legacy sites to the new Headquarters building. For the technology relocation planning, Bala shepherded a full physical to virtual (P to V) conversion of applications to a unified communications networking platform for the entire technology infrastructure. For the relocation effort, Bala provided guidance, planning and execution of seven (7) server move waves that were performed over a two (2) month time frame. The seven (7) server move waves were the combined effort of closing down the satellite offices and standing them back up at the new headquarters facility.
